```

### PROJECT

Hello everyone, this is my final TypeScript project for the Start2Impact course. The project involves writing TypeScript code by instantiating interfaces and classes for a fictitious online media called Voci, whose aim is to support gender equality through training courses.

3 / 6 23 MAGGIO 2024

### WHY

The inspiration comes from the connection to the theme and from a book called "Goddesses in Everywoman," which portrays women through archetypes inspired by Greek goddesses.

The goal is to create training courses inspired by this book and to deliver them through various media channels with the help of qualified professionals.

# CODEPEN

HTTPS://GITHUB.COM/ALESSIOBUCHERI/TYPESCRIPT

The project was written locally directly in VSCode but has also been uploaded to the online service CodePen to make it accessible and available to everyone.
